Using WinSCP to upload your web pages to sunset.

These instructions depend upon the fact that you have activated your sunset account and know that you can sign on successfully.

Note that this is a list of steps for specific to our class today.

Take the following steps to login to your sunset account.

1. Click the Start button and type "winscp" in the Search Programs and files text entry command box.

   You will see a list of programs installed on the computer named winscp...

2. Click "winscp" from the list that appears.

   The Winscp application will begin and you will see the GUI shown below:

![WinSCP Login GUI](image-url)
3. Type in:
   a. `sunset.olemiss.edu` into the text entry box labeled "Host Name".
   b. Your username into the textbox labeled User name.
   c. Your password into the textbox labeled Password.

Note: Leave the other settings as you see them in the graphic.

For example: Port number at 22.

![WinSCP Login window](image)

4. Click the Login button.

If it is the first time you are connecting to this server, you will see this:

![Warning dialog](image)

5. For our class, the server sunset is trusted, so we will click the YES button.
6. You will see this.

The left pane lists the files on your local computer and the right pane lists the files on the remote computer – sunset in this case.

Focus on the right pane and find the folder named public_html. All of your web pages must be placed in this folder in order to be viewed.

7. Open the folder public_html. You will see a blank area in the right pane, i.e. no files listed which means that the folder is currently empty. (not pictured)

Focus on the files listed in the left pane, and navigate to the folder containing your web pages. (index.html, hobby.html and career.html). Use the drag and drop technique to copy each one of these three files from your local folder to sunset, i.e. the right pane.

8. Once you have done this, go to your web browser and type in the following URL:

   http://www.olemiss.edu/~username/

   replacing username with your own username. For example, I use cbzickos.

9. In response the browser will find the web page index.html in your public_html folder and display it in the window.

   Phone a Parent or Friend!

   You have now successfully created your personal web site on the World Wide Web!
